Secure Backup Protection

Protect your data with ATG|backup backup solution, manage it all with an integrated centralized management platform and choose to backup to our military-grade data centers, or your own. ATG|backup ensures your corporate data is always protected.

ATG|backup uses a military-grade encryption process to protect your business data. This means your files are encrypted three times during the three stages of an online backup:

- Local encryption
- Encrypted in transit during upload
- Encrypted at rest in the data center

This encryption method is the same as that used by the US military. Even data that is backed up on a local device with **ATG|backup** is encrypted. **ATG|backup** is also compliant with many government regulations, allowing it to be used in a variety of industries.

ATG|backup includes three technologies to create scalable and secure online backup for business.

- 1 Centralized Management.** **ATG|backup** delivers a centralized management dashboard to keep you in control, and allows for remote deployment, management, and monitoring.
- 2 Server Backup and Recovery.** **ATG|backup** delivers an affordable, enterprise-grade solution to ensure your corporate data is always protected with complete server backup, bare metal backup, and Exchange granular recovery.
- 3 Unlimited Endpoint Protection.** **ATG|backup** backs up any file or folder on standard Windows machines, Mac laptops and desktops, as well as iOS and Android devices such as smartphones and tablets. This is a perfect solution for the BYOD (bring your own device) environment.
