

# ATG|guard

## Endpoint Protection

**ATG|guard**, powered by EndGuard™, is a centrally managed, cloud endpoint data protection solution that protects corporate data everywhere where it lives, including laptops, tablets, and smartphones. Secure backup, best-in class data-loss prevention, and restore capabilities are combined in a single, unified application to simplify management for IT, improve business productivity, and reduce security risk.

### A Backup Solution for All Devices

With **ATG|guard** you can backup endpoints across multiple OS platforms including Windows, Mac, iOS, Android and Windows phone. Additionally, remote wipe, heterogeneous data restore and geo-tracking is available across all users.

### Robust Monitoring and Reporting

**ATG|guard** provides an easy-to-use dashboard and mobile apps that allows IT to deploy changes, report and monitor endpoints. Also, a suite of robust reporting tools and analytics provide access to data usage and trends.

### Scalable Performance

**ATG|guard** offers nearly continuous data protection designed to provide transparent and efficient backup. Dynamic bandwidth management and CPU throttling reduce network storage and resources needed for efficient backups.
